Physical Oceanography: A Mathematical Introduction with MATLAB

Reza Malek-Madani

Physical Oceanography: A Mathematical Introduction with MATLAB Reza Malek-Madani

Accessible to advanced undergraduate students, **Physical Oceanography: A Mathematical Introduction with MATLAB®** demonstrates how to use the basic tenets of multivariate calculus to derive the governing equations of fluid dynamics in a rotating frame. It also explains how to use linear algebra and partial differential equations (PDEs) to solve basic initial-boundary value problems that have become the hallmark of physical oceanography. The book makes the most of MATLAB's matrix algebraic functions, differential equation solvers, and visualization capabilities.

Focusing on the interplay between applied mathematics and geophysical fluid dynamics, the text presents fundamental analytical and computational tools necessary for modeling ocean currents. In physical oceanography, the fluid flows of interest occur on a planet that rotates; this rotation can balance the forces acting on the fluid particles in such a delicate fashion to produce exquisite phenomena, such as the Gulf Stream, the Jet Stream, and internal waves. It is precisely because of the role that rotation plays in oceanography that the field is fundamentally different from the rectilinear fluid flows typically observed and measured in laboratories. Much of this text discusses how the existence of the Gulf Stream can be explained by the proper balance among the Coriolis force, wind stress, and molecular frictional forces.

Through the use of MATLAB, the author takes a fresh look at advanced topics and fundamental problems that define physical oceanography today. The projects in each chapter incorporate a significant component of MATLAB programming. These projects can be used as capstone projects or honors theses for students inclined to pursue a special project in applied mathematics.

From reader reviews:

Priscilla McCreary:

In this 21st millennium, people become competitive in each way. By being competitive now, people have do something to make them survives, being in the middle of the crowded place and notice through surrounding. One thing that often many people have underestimated this for a while is reading. Sure, by reading a e-book your ability to survive enhance then having chance to remain than other is high. For yourself who want to start reading some sort of book, we give you that Physical Oceanography: A Mathematical Introduction with MATLAB book as beginning and daily reading publication. Why, because this book is greater than just a book.

Clarine Davidson:

This book untitled Physical Oceanography: A Mathematical Introduction with MATLAB to be one of several books in which best seller in this year, that is because when you read this book you can get a lot of benefit in it. You will easily to buy this particular book in the book retail outlet or you can order it through online. The publisher of this book sells the e-book too. It makes you quicker to read this book, as you can read this book in your Smartphone. So there is no reason to you personally to past this publication from your list.

Kenneth Copeland:

Beside this particular Physical Oceanography: A Mathematical Introduction with MATLAB in your phone, it can give you a way to get nearer to the new knowledge or data. The information and the knowledge you might got here is fresh from the oven so don't be worry if you feel like an previous people live in narrow small town. It is good thing to have Physical Oceanography: A Mathematical Introduction with MATLAB because this book offers to you readable information. Do you oftentimes have book but you do not get what it's all about. Oh come on, that will not happen if you have this within your hand. The Enjoyable option here cannot be questionable, similar to treasuring beautiful island. Techniques you still want to miss that? Find this book along with read it from currently!

Paul Breen:

Reading a e-book make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is published or printed or illustrated from each source that will filled update of news. With this modern era like currently, many ways to get information are available for an individual. From media social such as newspaper, magazines, science book, encyclopedia, reference book, story and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just searching for the Physical Oceanography: A Mathematical Introduction with MATLAB when you desired it?
